CHEMISTRY PROFILE

According to the Bureau of Labor Statics, those who majored in Chemistry can expect employment in those areas to grow 7 percent from 2016 to 2026, about as fast as the average for all occupations. Employment of these professional is projected to grow as they continue to be needed in scientific research and development (R&D) and to monitor the quality of products and processes.

In pharmaceutical and medicine manufacturing, chemists will be increasingly needed to develop nanotechnology for medicinal uses, and in basic chemical manufacturing, employers will call upon chemists to use knowledge of green chemistry to improve environmental safety in the workplace and community. Employment of materials scientists is projected to grow 7 percent as demand holds steady for cheaper, safer, and better quality materials for a variety of purposes, such as electronics, energy, and transportation. Environmental research will offer many new opportunities for chemists and materials scientists.

WHAT YOU CAN DO NOW

Join a professional chemistry society or association – See list below
Consider studying abroad. Click here to learn more.
Volunteer for WCSU’s Vita Program
Volunteer for Junior Achievement in your community
ASSOCIATIONS

Professional associations are a great way for college students, recent graduates, and career changers to enhance personal and professional development while being provided endless networking opportunities. Being a member of an association also offers chances to attend conferences, learn about latest industry trends, scholarships, internship opportunities, along with attitudes and competencies expected in the industries of interest. Many associations encourage students to participate and even offer drastically reduced membership rates. Joining an association could be the best thing you do for your career.
