WESTERN CONNECTICUT STATE UNIVERSITY

HAZARDOUS WASTE CONTINGENCY PLAN

PROCEDURE   E-115

Issued 10/18/02
Revised 11/5/03; 3/22/05

Please direct any questions or comments about the applicability of this document to Luigi Marcone, WCSU Department of Public Safety

Developed for WCSU by URS Corporation
1.0 PURPOSE
This procedure establishes the Hazardous Waste Contingency Plan for the storage of hazardous wastes at Western Connecticut State University (WCSU). The purpose of the Plan is, as stated in 40 CFR 265.51(a), to “minimize hazards to human health or the environment from fires, explosions, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water.”

2.0 APPLICATION
The provisions of this Plan are to be carried out immediately whenever there is a fire, explosion, or release of hazardous waste or hazardous waste constituents which could threaten human health or the environment. Specifically, this Plan addresses emergencies related to hazardous wastes stored at the Central Hazardous Waste Storage Facility at WCSU (referred to as the “Facility”). This plan does not cover 1) hazardous wastes managed as part of satellite accumulation areas; 2) virgin chemicals, such as those stored within laboratories and chemical stock rooms; or 3) radioactive or biomedical wastes.

3.0 AUTHORITY
Title 40 Code of Federal Regulations (CFR) 265.50 through 265.56
[as referenced in 40 CFR 262.34(a)(4)]
Regulations of Connecticut State Agencies, Section 22a-449(c)-105(1)
[as referenced in 22a-449(c)-102(1)]
(The state regulations incorporate the federal regulations in their entirety, with no additional requirements.)

4.0 FACILITY DESCRIPTION
4.1 Facility Location
The Central Hazardous Waste Storage Facility is located on WCSU’s Midtown campus at:

Higgins Hall
Seventh Avenue
Danbury, CT 06810

The entrance to the Central Hazardous Waste Storage Facility is on the west side of Higgins Hall, beneath the central greenhouse. The Facility is located in a self-contained area of the basement. The surrounding area includes university classrooms, administrative offices, student residence halls, and a student center. A map of the area is included as Figure 1.

4.2 Facility Layout
The Central Hazardous Waste Storage Facility is an 8- by 20-foot room. The room is of masonry construction, with a Class I Division I electrical system. The room contains smoke detection equipment, a sprinkler system, and fire extinguishers. A 5-inch-high masonry berm is located on the inside of the room at the entryway to contain potential spills. Access to the room is restricted. An
emergency telephone is located on the wall just outside the door. The facility layout is shown graphically in Figure 2.

4.3 Facility Operation
The Central Hazardous Waste Storage Facility serves as the location where hazardous wastes are stored prior to being picked up for recycle or disposal by a licensed hazardous waste transporter. Hazardous wastes are generally generated in one of three ways:
1. As part of research activities and teaching experiments in the Chemistry, Biology, Physics, and Astronomy departments
2. As part of teaching and student activities in the Visual Arts departments (i.e., painting, sculpture, ceramics, lithography, and photography studios)
3. As a result of the clean-out of old, expired, and unused chemicals

Typically, hazardous wastes generated in the first two processes described above are accumulated near the point of generation in satellite accumulation areas (SAAs). Once the accumulation containers are full, they are transferred to the Central Hazardous Waste Storage Facility. Old, expired, and unused chemicals are typically transferred directly to the Central Hazardous Waste Storage Facility, once they are declared a waste.

Due to a high number of chemical clean-outs, WCSU is currently classified as Large Quantity Generator (LQG). As such, hazardous wastes may be stored at the Central Hazardous Waste Storage Facility for a maximum of 90 days before being removed for disposal or recycle by a licensed hazardous waste transporter. A Contingency Plan is required for all LQGs of hazardous waste.

5.0 CONTACTS (i.e., EMERGENCY COORDINATOR)

5.1 Identification of the Emergency Coordinator

As required in 40 CFR 265.55, at all times, there is at least one employee either on the Facility premises or on call (i.e., available to respond to an emergency by reaching the Facility within a short period of time) with the responsibility for coordinating all emergency response measures. The sole emergency coordinator at WCSU, who meets the qualifications listed below, is:

<table>

The implementation of this Plan in the event of an emergency is the responsibility of the emergency coordinator. This emergency coordinator is thoroughly familiar with all aspects of the Facility’s Contingency Plan, all operations and activities at the Facility, the location and characteristic of waste handled, the location of records within the Facility, and the Facility layout. In addition, this person has the authority to commit the resources needed to carry out the Contingency Plan.

5.2 Roles, Responsibilities, and Other Requirements of the Emergency Coordinator

As stated above, the emergency coordinator is responsible for the implementation of this Plan in the event of an emergency at the Central Hazardous Waste Storage Area. Specific duties once an emergency is identified are described in Section 7.0.

In general, the emergency coordinator is in charge of all initial actions taken in response to an emergency. The emergency coordinator continues in this lead role
until the Danbury Fire Department arrives, as which time he relinquishes control to the Danbury Fire Department’s Incident Commander. Once control is relinquished, the emergency coordinator acts as a liaison between the Incident Commander and university personnel. The emergency coordinator inspects the emergency equipment on a monthly basis (see Section 8.0) to ensure that items are present and operational. The emergency coordinator also reviews this Contingency Plan annually (see Section 10.0) to ensure that it is kept current.

6.0 ARRANGEMENTS WITH LOCAL AUTHORITIES
Under 40 CFR 265.37, a facility must attempt to make the following arrangements, where applicable:

- Arrangements to familiarize police, fire departments, and emergency response teams with the layout of the facility, properties of hazardous waste handled at the facility and associated hazards, places where facility personnel would normally be working, entrances to roads inside the facility, and possible evacuation routes;
- Agreements with state emergency response teams, emergency response contractors, and equipment suppliers; and
- Arrangements to familiarize local hospitals with the properties of hazardous waste handled at the facility and the types of injuries or illnesses which could result from fires, explosions, or releases at the facility.

WCSU has attempted to make the abovementioned arrangements with the list of local authorities provided in Section 9.0. Letters were written in 2002, and are maintained on-file at the Environmental Health and Safety Office. Contracts are in place with two firms to provide spill cleanup/emergency response services.

7.0 EMERGENCY PROCEDURES
7.1 Initial Response – Emergency Coordinator
In order to comply with the applicable regulations and minimize the hazards associated with an emergency situation, the emergency coordinator must take the following actions upon discovery of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water at the Facility:

1. Immediately activate internal Facility alarms or communications systems to notify potentially affected personnel. The alarm communicates directly to University Police dispatch, who in turn dispatch the Danbury Fire Department. Assist in evacuation of affected persons, following the evacuation plan included in Attachment 1.

2. Immediately notify the CTDEP Oil and Chemical Spill Response Division (860-424-3338) and the Danbury Fire Department (911 or 203-796-1555, as

Issued 10/18/02; Revised 3/22/05
appropriate). It is not necessary to separately notify the SERC or the Danbury LEPC at this time.

3. Immediately identify the character, exact source, amount, and real extent of any released materials. This may be done by observation or review of Facility records/manifests and, if necessary, by chemical analysis.

4. Assess possible hazards to human health or the environment that may result from the release, fire, or explosion. This assessment must consider both direct and indirect effects of the release, fire, or explosion.

5. If it is determined that human health or the environment outside of the Central Hazardous Waste Storage Facility is threatened:

   a. Immediately notify the Danbury Fire and Police departments if evacuation of local areas may be advisable. Also, be available to help appropriate officials decide whether local areas should be evacuated. If additional evacuation is deemed necessary, evacuation should follow the plan included in Attachment 1.

   b. Immediately notify the National Response Center (800-424-8802). This notification must include the following information:

      ➢ Name and telephone number of the reporter (i.e., emergency coordinator)

      ➢ Name and address of the Facility

      ➢ Time and type of incident (e.g., release, fire)

      ➢ Name and quantity of material(s) involved, to the extent known;

      ➢ The extent of injuries, if any

      ➢ The possible hazards to human health or the environment outside of the facility

7.2 Continued Response – Emergency Coordinator
During an emergency, the emergency coordinator must take all reasonable measures necessary to ensure that fires, explosions, and releases do not occur, recur, or spread to other areas of the Facility. These measures must include collecting and containing released waste and removing or isolating containers. As stated in Section 5.2, the emergency coordinator continues in the lead role until the Danbury Fire Department arrives, at which time he relinquishes control to the Danbury Fire Department’s Incident Commander. Once control is relinquished,
the emergency coordinator acts as a liaison between the Incident Commander and university personnel during the continued emergency response phase.

Within 24 hours of the emergency, the emergency coordinator must complete a written “Report of Petroleum or Chemical Product Discharge, Spillage, Seepage, Filtration” form (Attachment 2) and mail it to CT DEP, the SERC, and the Danbury LEPC.

7.3 Post-Response Actions – Emergency Coordinator
Immediately after an emergency, the emergency coordinator must provide for treating, storing, or disposing of recovered waste, contaminated soil, or surface water, or any other material that results from a release, fire, or explosion at the Facility. It should be noted that this waste should be handled according to applicable hazardous waste requirements. The emergency coordinator must also ensure that no waste that may be incompatible with the released material is treated, stored, or disposed of until cleanup procedures are completed. Additionally, he must ensure that all emergency equipment used (see Section 8.0) is cleaned and rendered fit for its intended use.

Once the tasks in the above paragraph are completed, the emergency coordinator must notify the EPA Region I and the CTDEP Administrators that the appropriate measures described above have been taken. After this notification, with the Administrators’ approvals, normal operations can resume.

The time, date, and details of any incident that requires the implementation of this Contingency Plan will be noted and maintained with the inspection logs for the Facility. Additionally, within 15 days of the incident, the emergency coordinator will submit a written report on the incident to the EPA Region I and the CT DEP Administrators. The report will include:

- Name, address, and telephone number of the owner or operator;
- Name, address, and telephone number of the facility;
- Date, time, and type of incident (e.g., fire, explosion);
- Name and quantity of material(s) involved;
- The extent of injuries, if any;
- An assessment of actual or potential hazards to human health or the environment, if applicable; and
- Estimated quantity and disposition of recovered material that resulted from the incident.

8.0 EMERGENCY EQUIPMENT
A list of all emergency equipment at the Facility is included as Attachment 3. The list also includes the location and a physical description of each item, along with a brief outline of each item’s capabilities. The emergency coordinator or his designee will inspect the presence and condition of emergency equipment on a monthly basis, using the inspection sheet in Attachment 3.

Issued 10/18/02; Revised 3/22/05
9.0 PLAN DISTRIBUTION
A copy of this Contingency Plan and all revisions to the Plan is maintained at the Central Hazardous Waste Storage Facility and at the Environmental Health and Safety Office. In addition, a copy has been submitted to all local police departments, fire departments, hospitals, and State and local emergency response teams that may be called upon to provide emergency services. Specifically, this Contingency Plan for the Facility at WCSU has been provided to the following parties:

Danbury Police Department
120 Main Street
Danbury, CT  06810
203-797-4614
Attn: Chief of Police

Danbury Fire Department
19 New Street

Attn: Seb Cannata

10.0 PLAN AMENDMENTS AND REVIEW
This Contingency Plan will be reviewed, and immediately amended, if necessary, whenever:

- Applicable regulations are revised;
- The Plan fails in an emergency;
- The emergency coordinator changes, or an alternate emergency coordinator is added;
- The list of emergency equipment changes;

Issued 10/18/02; Revised 3/22/05
The Facility changes (in its design, construction, operation, maintenance, or other circumstances) in a way that materially increases the potential for fires, explosions, or releases of hazardous waste or hazardous waste constituents; or

The Facility changes (in its design, construction, operation, maintenance, or other circumstances) in a way that changes the response necessary in an emergency.

Minor revisions (i.e., affecting only a few pages) will be indicated by a letter after the revision number (e.g., Revision 1a), accompanied by the date of the revision. Major revisions will be assigned the next sequential revision number (e.g., Revision 2), accompanied by the date of the revision. Amendments will be distributed to all parties listed in Section 9.0 of this Plan. In the case of minor revisions, only affected pages (with instructions on how to replace the revised sections) will be sent. All amendments will be mailed with a transmittal form letter (Attachment 4), requesting a return response to indicate receipt of the amendments.

In order to ensure that this Contingency Plan is amended as necessary, the Plan will be reviewed annually by the emergency coordinator. The annual review will be documented on a checklist (Attachment 5) and kept on-file as documentation. Any required revisions identified will be made and distributed as described above.
